

TINO APRIKA SANTOSO

Full Stack Developer

✉ tino.santoso92@gmail.com 📞 6285186682433 📍 South Tangerang

Passionate Full Stack developer in building comprehensive web applications using Laravel and CodeIgniter. Expertise in integrating APIs, particularly payment gateways, to enhance functionality and user experience. I create dynamic and responsive front-ends with React and develop practical desktop applications with Python and Tkinter, exemplified by work on relay turnstile systems

Experience

Fullstack Developer | Essity - GOP 6, Serpong Indonesia June 2025 - August 2025

- As a Fullstack Developer, developed and maintained comprehensive CRM solutions to optimize sales operations and client management. My key contributions included building robust systems for tracking sales team visits to clients, implementing automated reporting mechanisms for working days management, and creating detailed sales report dashboards segmented by district. This role involved working with both frontend and backend technologies to deliver seamless user experiences for sales teams while ensuring accurate data collection and reporting capabilities

Tutor | PT. CGS - Remote September 2024 - December 2024

- As an Experienced Instructor at CGS for the Fullstack Development Program, contribute to shaping future ready tech talent through impactful, hands-on guidance in Laravel development. This role spans across comprehensive fullstack training, where I help learners excel in both frontend and backend technologies, with a particular focus on Laravel framework implementation. My focus is on delivering a meaningful learning experience that equips students with practical fullstack development skills to succeed in diverse web development real projects applications.

Fullstack Developer | Globaltix - GOP 1, Serpong Indonesia March 2022 - June 2024

- As a Fullstack Developer, developed and maintained web applications also integrating APIs, focus on payment gateway systems as our product GTPay using CodeIgniter 4.
- I successfully integrated Xendit and Midtrans APIs to facilitate seamless online payment transactions for GTPay mechants.
- Additionally, I worked on a project involving a turnstile visitor gate system, where I developed the application using Python Tkinter to manage and control visitor access.
- I also worked on project creating a middleware API that bridged the Globaltix system with NetSuite Oracle, automating the process of pushing daily transactions from multiple Taman Safari units. This project was built using CodeIgniter 3 and utilized a scheduler to ensure accurate and timely transaction data transfer.
- I was responsible for developing web applications and integrating APIs, focus on payment gateway systems as our product GTPay using CodeIgniter 4. I successfully integrated Xendit and Midtrans APIs to facilitate seamless online payment transactions for GTPay mechants. Additionally, I worked on a project involving a turnstile visitor gate system, where I developed the application using Python Tkinter to manage and control visitor access. I also worked on project creating a middleware API that bridged the Globaltix system with NetSuite Oracle, automating the process of pushing daily transactions from multiple Taman Safari units. This project was built using CodeIgniter 3 and utilized a scheduler to ensure accurate and timely transaction data transfer.

Software Developer | PT. Sewu Segar Nusantara - Curug, Kab. Tangerang December 2020 - December 2021

- I was responsible for developing web applications and integrating APIs to streamline business processes.
- One of the key projects was integrating the Locus API using Laravel to track the journey of fruit delivery trucks. This integration provided estimated delivery times from the warehouse to the delivery point and optimized delivery routes, ensuring more efficient logistics management for company.
- Additionally, I developed an work order system (e-SPK) with a multi-level approval system. it was designed to handle task management across multiple departments, including warehouse, production, and quality control. Each department could submit task request forms, and the system would route these requests through the appropriate approval channels, ensuring accountability for every task performed

Programmer | PT. Rapid Teknologi Indonesia - Serpong, Banten Indonesia April 2020 - December 2020

- I was responsible for continuing the development of the company's existing AGIT e-magazine platform, My role included enhancing and maintaining the platform using the CodeIgniter PHP framework and MySQL database.

Web Programmer | PT. Inet Global Indo - Mampang, Jakarta Selatan Indonesia March 2018 - January 2020

- I was responsible for maintaining and enhancing multiple applications. My work involved both backend and frontend development using a variety of technologies, including ASP .NET, PHP, jQuery and SQL Server.
- Maintenance of CDC Customer Portal (www.cyberdc.net) and Coresystem Portal (coresystem.cyberdc.net) These projects, built with ASP .NET and SQL Server, involved providing ongoing support and bug fixing.
- Nexmo Web Application (nexmo.inet.net.id) Developed and maintained this web application using PHP and SQL Server. Responsibilities included adding new features, refactoring database queries, and bug fixing.
- E-Billing Application (ebilling.inet.net.id) Developed and maintained the E-Billing application using PHP and SQL Server. Included Report Implementation weekly and monthly reports for server loan services and Bug fixing.

Education

Bachelor's Degree in Informatics | Universitas Islam Indonesia - Kaliurang, Yogyakarta

- GPA: 2,86

Skills

PHP - Advanced | Javascript - Advanced | Python - Intermediate | Typescript - Intermediate | Laravel - Advanced | CodeIgniter - Advanced | React - Intermediate | Node JS - Intermediate | MySQL - Advanced | PostgreSQL - Advanced | GIT - Advanced

Languages

English - Intermediate | Indonesia - Native
